

ERAGROSTIS TEFF

BLUE NILE

OVERVIEW

BLUE NILE TEFF should be sown at 15kg/ha optimum drilled (lower rates may allow higher weed infestation). If broadcast, then 20kg/ha.

Teff grows best in a fine, firm seedbed and must be well rolled. The seed must not be buried too deep.

A summer annual grass which grows under a wide range of conditions. Widely adapted to soil types.

It has a light green narrow foliage. Time of inflorescence is early.

- A brown-seeded teff with an open, light green inflorescence
- Similar to SA Brown
- Excellent for Hay production
- Upright growth habit
- Established in summer months
