

# WESTERWOLD RYEGRASS

## JIVET (TETRAPLOID)

### ONE IN A THOUSAND

JIVET is an annual ryegrass that is very quick to establish, has excellent winter and spring performance and improved feed quality in spring.

JIVET shows exceptionally large adaptation to climates and growing conditions. This is evidence of a very high concentration of good genes in the genome.

**FAST YIELDS** - The main reason for growing westerwold ryegrass is to obtain as high yields as fast as possible. JIVET proves its superiority by being on top of several variety lists.

**RELIABLE QUALITY** - JIVET shows high lodging and rust resistance, Xanthomonas tolerance – all parameters assuring higher quality and yield.

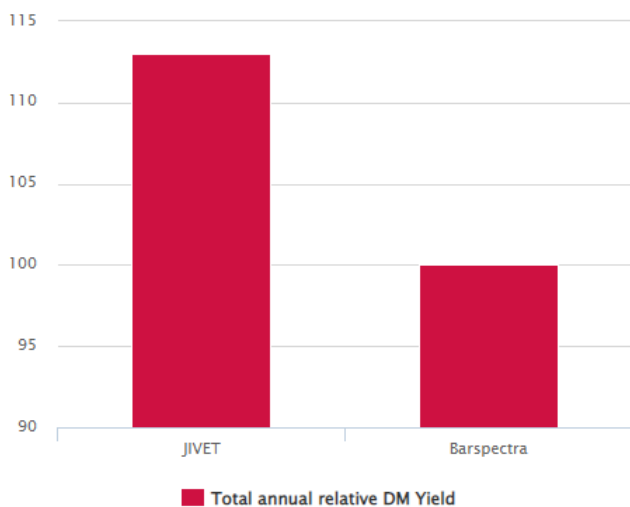

As JIVET is a premium grass, it is not as cheap as some old cultivars, but is actually more profitable to grow and has been extensively tested in South Africa. The performance of cattle on JIVET is also excellent.

- Adapted to different climates
- Number one in yield
- High quality
- Highly competitive

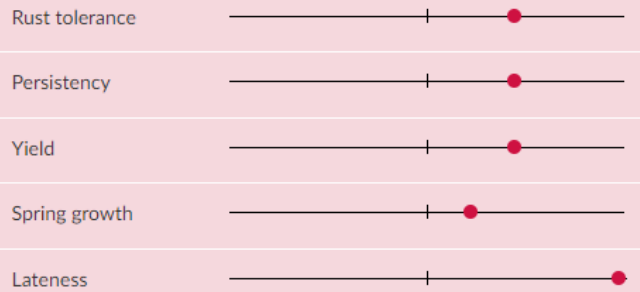

### Annual drymatter yield
