

# HYBRID SUNFLOWER

## CAP 4064

### MEDIUM -LATE MATURING

With exceptional self-compatibility, this high yielding sunflower hybrid has proven itself around the world as a top performer. CAP 4064 is a medium-late maturity hybrid with excellent standability and disease resistance.

#### Medium/Full Season Maturity

CAP 4064 is a medium-late maturing variety that reaches 50% flower in approximately 75 days. Harvest can be expected in approximately 140 days, depending on conditions.

#### Yield Potential

CAP 4064 consistently produces excellent yields in both trials and farmer's fields. It's standability is excellent, aided by thick stalks and vigorous growth.

#### Disease Resistance

CAP 4064 has an excellent level of disease tolerance to the major sunflower diseases including leaf rust, albugo white blister and Alternaria.

#### Oil Production

CAP 4064 is a consistently high producer of poly unsaturated oil. This makes it a popular choice with both farmers and crushers.

#### Semi—pendulous Heads

CAP 4064 has semi-pendulous heads which helps to reduce sunburn, head rot and bird damage. Its excellent self-compatibility is useful when native pollinators or bees are low in number.
