

PERENNIAL RYEGRASS

OPTIMUM (DIPLOID)

OVERVIEW

A temperate perennial which is adapted to cool moist areas – fertile soils preferably with irrigation.

OPTIMUM is mainly used in grazing and combines well with clovers. It has an establishment of 12-28 kg/ ha.

OPTIMUM has withstood the test of time and is still widely used around the world. Newer varieties are available however that may out perform NUI

-
- Used mainly in grazing
 - Combines well with clovers
 - Establishment: Plant 12-28kg/ha
