

YELLOW OPEN POLLINATED MAIZE

NOMAD

EARLY

MEDIUM

LATE

OVERVIEW

NOMAD is a non-GMO, early maturing, open-pollinated maize variety. NOMAD produces yellow grain and demonstrates excellent adaptability across diverse farming conditions. It combines drought tolerance with high nitrogen-use efficiency, while offering strong resistance to grey leaf spot, maize streak virus, and Turcicum leaf blight. NOMAD is well-suited for food use, it performs reliably in tropical, rain-fed, dry or wet mid-altitude, and lowland ecologies throughout Southern Africa, as well as in comparable agroecological regions.

- Drought tolerant
- Nitrogen-use efficiency
- Resistant to common diseases
- Early to medium maturing
- Large kernels
