

YELLOW HYBRID MAIZE

CAP9-522

EARLY

MEDIUM

LATE

EXCELLENT SILAGE OR GRAIN CROP

CAP9-522 is a medium maturity, prolific hybrid. This hybrid has long cylindrical cobs with a semi dent grain. The hybrid has large plants.

CAP9-522 can give high grain yields of up to 15mt/ ha when planted under high population density of between 60 000 - 70 000 plants per hectare making a suitable variety in higher potential areas under irrigation. It is also suitable for low potential areas under low plant populations due to its' prolificacy.

This hybrid has reasonably good tolerance to diseases. It responds well to fertilizer in high potential areas of the main farming regions of South Africa. CAP9-522 is also an excellent silage variety.

CAP9-522 has 110 - 120 days to physiological maturity in warmer areas and 134 days in cooler regions.

Trials yield per hectare:

7.5 tonnes of dry land with a 45 000 PS

11.5 tons of irrigation up to 80,000 PS

Recommended for regions:

1 - Western Region

2 - Temperate Eastern Region

3 - Cold Eastern Region

- Responds well to fertilizers, irrigation and fairly high pop. density
- High disease resistance
- Tolerant to Stalk Rot and lodging
- Susceptible to Grey leaf spot, rust and H.T. Please follow a good spray program
- Yield potential of up to 12 MT/ha
- Good drought tolerance

Our farmers are serious about farming.
We're serious about seed.
