

# WHITE HYBRID MAIZE

## CAP 9005 NG

EARLY

MEDIUM

LATE

### Highly prolific hybrid

CAP 9005 is a highly prolific hybrid with hard, white dent kernels. It has mainly flat white pips and good husk cover.

It is a medium maturing hybrid that is tolerant to most foliar diseases. It has good standability and is widely adaptable.

The hybrid does well under irrigation and also yields well under dryland conditions.

This hybrid was bred by Dr. Pip Nelson who has over 40 years experience in maize breeding.

- Highly Prolific
- Hard dent, white kernels
- Mainly round flat pips
- Medium maturing hybrid

### Freestate performer

This is a medium maturing white maize hybrid. It has consistently done well in trials around the Freestate province. It performs very well under optimum moisture regimes.

It is a medium maturing variety with dent grain type and medium sized pips. This variety is prolific when planted at average spacing and tolerant to rust, smut and con rot. It also has good husk cover which minimizes damage from birds and pests.

- Medium maturity
- Dent grain type with medium sized pips
- Prolific when planted at average spacing
- Tolerant to rust, smut and cob rot
