

ANNUAL RYEGRASS MIXTURES

PASTURE MAX DIPLOID PASTURE MAX SUPER TETRAPLOID

OVERVIEW

Italian ryegrasses have vigorous spring growth and give extended grazing in early summer. Westerwold Ryegrasses have good autumn grazing and winter growth. Therefore by blending the two, you can get the benefits of both.

These blends can in turn also be mixed with clover for added nutrition and increased spring and Autumn production. The mixtures can be supplied with a bag of the weighed Clover seed and are called PASTURE MAX +C and PASTURE MAX Super+C.

PASTURE MAX is a blend of diploid and tetraploid ryegrasses and PASTURE MAX SUPER is a blend of elite Italian and Westerwold tetraploid varieties

- Maximizes your pasture performance
- Can be mixed with clover for added nutrition
- PASTURE MAX is a blend of diploid and tetraploid ryegrass
