

SERADELLA PINK - FRENCH

EMENA

OVERVIEW

EMENA features a high level of hard seed with continual breakdown over summer and autumn. It is a deep rooted variety that is suitable for a wide range of soil types including highly acidic and infertile sands. It is header harvestable and has a good tolerance to Red Legged Earth Mite and Aphids. It is non bloating and free of phytoestrogens.

- High level of hard seed
- Deep rooted
- Suitable for a wide range of soil types
- Header harvestable

VETCH

BLANCHEFLEUR

OVERVIEW

The preferred grain variety for lower rainfall areas (less than 350mm), BLANCHEFLEUR shows improved ascochyta resistance and dry matter production over Languedoc. BLANCHEFLEUR is a mid maturing variety and is one of the few Vicia sativa varieties to display the distinct white flowers after which the variety has been named.

Vetch, in general, is very palatable as a green feed and sheep graze it preferentially. It also has good potential as cattle feed. Vetch can be susceptible to Chocolate Spot and Rust. Re-growth is not as good as grazing Vetch under grazing, but it comes away quickly and combines well with cereals.

- Lower rainfall for average seed set is 350mm
- Mid flowering time
- Fair - Good forage production
- Less than 10% hard seed (unthreshed)
